

OUR STORY

It all started when two friends from across the world met online because of their passion for racing. They discovered a lack of capable and inclusive tuning software in the industry, so the two friends developed an innovative solution, and HP Tuners was born. HP Tuners is now recognized as offering the industry's most advanced and complete diagnostics and calibration hardware and software for thousands of OBDII-equipped import, domestic, and powersports vehicles around the globe.

WE MAKE THE TOOLS. YOU MAKE THE POWER.

HP Tuners' mission is to equip enthusiasts, tuning professionals, and aftermarket companies alike with the necessary tools to achieve their unique vehicle goals — horsepower gains, better fuel economy, and everything in between.

With complete custom tuning and diagnostics solutions, we support enthusiasts and professionals from start to finish, and beyond.

**HP Tuners and its MPVI3 interface do not provide any pre-made calibrations.*

BUILT FOR ENTHUSIASTS AND PROFESSIONALS OF ANY CALIBER

This extensive ecosystem of tuning and diagnostics tools is built for every kind of automotive enthusiast—from tuning professionals to DIY hobbyists. No other package on the market offers the high levels of user-friendliness, data integrity, technical support, or reliability as HP Tuners.

SOLUTIONS BUILT FOR YOU

THE HARDWARE

Connect your vehicle's control module to our tuning software using our latest generation OBDII interface—MPVI3. This highly sophisticated tool, used in conjunction with VCM Suite software, provides access to scan, log, read, edit, and write your vehicle via its OBDII port.

THE SOFTWARE

VCM Scanner provides the most in-depth and advanced look into a vehicle's health and performance. Users can view, chart, and scan vehicle data in real-time using both gauges and charts with state-of-the-art standalone data logging capabilities.

Use VCM Editor to build a custom calibration with access to a multitude of defined engine and transmission parameters — like, spark, fuel, RPM limits, exhaust valve control, torque management, and more. Plus, experience the quickest write times in the industry.

UNIQUE SOLUTIONS

HP Tuners also offers various services for select Engine Control Module (ECM), Powertrain Control Modules (PCM), and Transmission Control Modules (TCM), in addition to OBDII adapter cables for supported powersports vehicles, TrackAddict and RaceRender software for motorsports, and more.

For professionals, explore tune delivery and customer management solutions with Tune Delivery Network (TDN) and Remote Tuning Device (RTD). Make it yours with our RTD Private Label Program for approved businesses.
